

ABSTRACT OF THE DISCLOSURE

This invention is directed to an image printing apparatus which prints an original image as image information on a recording sheet and performs postprocessing on the recording sheet after printing operation. According to the image printing apparatus of the invention, image printing conditions include conditions concerning postprocessing to be executed by a punch unit and postprocessing device and selection information of a main tray or sub-tray. The image printing conditions are stored after being set as individual image printing conditions for each image information and linked to the image information. When image printing conditions are to be read out by a page readout unit, such individual image printing conditions are read out together with image information, printing and postprocessing are executed for each image information, i.e., each original image.
